THE MONEY THAT TALKS

Dollars have a way of slipping through one's

fingers. You break a \$10 bill and soon you find that

all you have left is a little change.

But deposit \$10 in a Savings Account and you have

put it where it will work for you at compound interest

until you release it.

You may not be able to account for the dollars you

spend, but the dollars you save never fail to give an

account of themselves.

Anxious Farm Buyers

The Maine Farm Agency wishes to an-

nounce to the people of Oxford County

that it has a number of farms for sale

at very low prices. These farms are

located in the best sections of the

county and are well adapted for

agriculture. The prices are so low

that they are a real opportunity

for anyone who wishes to acquire

land. The farms are located in the

best sections of the county and are

AMONG THE FARMERS.

"FEED THE FLOCK."

From Pasture to Orchard.

(By Prof. H. P. Swenson.)

Attention is frequently drawn to

pasture areas which apparently would

make suitable locations for apple orchards.

Figures on the cost of establishing

orchards on such locations should be of

interest.

The area from which these figures

have been obtained by the department

of agriculture is a five-acre tract which

will be planted this spring. It was

pasture land covered with a coppice growth

of maple and birch and a thick under-

growth of sweet fern and small brush.

The first problem was to get rid of

the bushes and this was accomplished

by cutting them down with a scythe.

They were cut and allowed to fall with-

out immediate attempt to pile them.

As soon as the brush was cut down

the ground was covered with a layer of

leaves and small branches. This was

then covered with a layer of straw.

The straw was then covered with a

layer of leaves and small branches.

This was then covered with a layer

of straw. The straw was then covered

with a layer of leaves and small

branches. This was then covered

with a layer of straw. The straw

was then covered with a layer of

leaves and small branches. This

was then covered with a layer of

straw. The straw was then covered

with a layer of leaves and small

branches. This was then covered

with a layer of straw. The straw

was then covered with a layer of

leaves and small branches. This

was then covered with a layer of

straw. The straw was then covered

with a layer of leaves and small

branches. This was then covered

with a layer of straw. The straw

was then covered with a layer of

leaves and small branches. This

was then covered with a layer of

straw. The straw was then covered

Strawberry Growing for Profit.

(By F. H. Hinchings, horticulturist, Orono, at Farm-ers' Week.)

An ideal site for strawberries is an

elevated, southerly or southerly plot,

with sufficient slope to prevent water

standing on the surface. For con-

venience, it should be near the home

buildings. The soil should be light,

loamy and well drained. It should be

rich in humus and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should

be well drained and have a high per-

centage of organic matter. It should
